SAFETY INFORMATION BULLETIN: SB00-4
(Supersedes Advisory Bulletin T4-94 issued December 9, 1994)

May 5, 2000

Subject: Fitting Registration Program

Fitting registrations issued by MCCR prior to 1990 are null and void. This includes all fitting registrations with the numerical digits less than 550 (e.g. < 0H550.5) and all those registrations from the former system of numbering that did not use the fitting category code in the prefix of the Canadian Registration Number (CRN) (e.g. 01234.5) as defined by clause **4.3.4 of CSA B51**. Affected manufacturers have been notified and re-registration has been undertaken.

For registrations issued since 1990, the registration is typically valid for 10 years. The expiry date for the registration of a fitting design is identified on the Statutory Declaration form. If there are any questions about the validity of a specific C.R.N. that cannot be verified, please contact the Boilers and Pressure Vessel Safety Division Engineering staff for confirmation.

ERIC DAHLIN,
Vice President
Boilers & Pressure Vessels Safety Division
